HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Status of the Claims

1. Applicant's amendments to claim 37 are acknowledged, as well as the cancellation of claim 46, and the addition of new claims 48 - 51.
2. Currently, claims 2, 5, 6, 12, 37 – 45 and 47 – 51 are pending and considered allowable.

Withdrawn Rejections

3. All previous rejections of the claims under 35 U.S.C. 103(a) are withdrawn in view of Applicant's arguments filed October 5, 2009. In particular, Applicant's arguments (see pages 6-10) that it would not have been obvious to modify the device of Brooks et al. in view of Jou et al. to include "a calibration zone within which is immobilized a **polyelectrolyte** having a net charge opposite to that of and configured to bind with the detection probes, the calibration probes, or combinations thereof" is found persuasive.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jason Johnston on December 16, 2009.

The application has been amended as follows:

In claim 37, line 12, after the term "immobilized" include the phrase --a third capture reagent including--.

REASONS FOR ALLOWANCE

5. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach or suggest a method for detecting an analyte in a test sample, the method comprising:

i) providing an assay device that comprises:

a sampling pad that defines a scavenging zone in which is non-diffusively immobilized a first capture reagent configured to specifically bind with the analyte;

a conjugate pad that contains detection probes and optional calibration probes, the detection probes being configured with a first binding member configured to specifically bind with the analyte; and

a porous membrane in fluid communication with the sampling pad and the conjugate pad, the porous membrane defining a detection zone in which is immobilized a second capture reagent configured to specifically bind with the analyte and a calibration zone within which is immobilized a third capture reagent including a polyelectrolyte having a net charge opposite to that of and configured to bind with the detection probes, the calibration probes, or combinations thereof,

wherein the detection zone and calibration zone are located downstream from the sampling pad and the conjugate pad;

ii) contacting the assay device with the test sample, wherein a quantity of the analyte in the test sample less than or equal to a predefined base quantity binds to the first capture reagent at the scavenging zone and a quantity of the analyte in excess of the predefined base quantity binds to the specific binding member of the detection probes to form complexes that flow through the porous membrane and bind to the second capture reagent in the detection zone to generate a detection signal, and wherein the detection probes, the calibration probes, or a combination thereof, flow through the porous membrane and bind to the third capture reagent at the calibration zone to generate a calibration signal;

iii) detecting the intensity of the detection and calibration signals; and

iv) comparing the intensity of the detection signal to the intensity of the calibration signal, wherein the quantity of the analyte within the test sample in excess of the predefined base quantity is proportional to the intensity of the detection signal calibrated by the intensity of the calibration signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
